Experiment - 3

To study the packet tracer & analyse the behaviour of network devices

AIM: To understand environment of Cisco Packet Tracer.

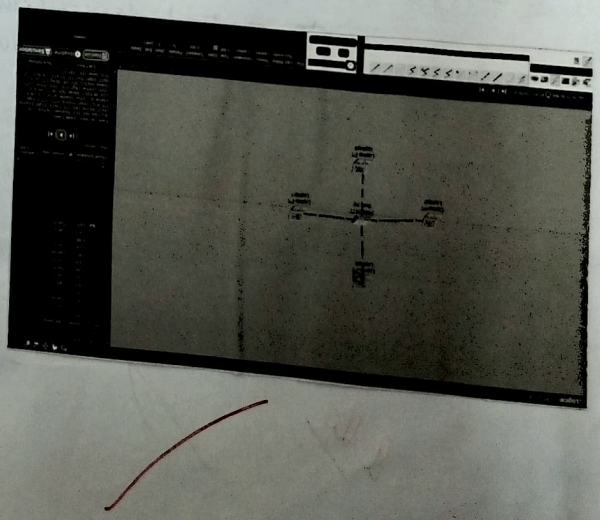

1) Hub:

* A Hub forwards the received data to all connected devices without checking destination.
* Every PC connected to Hub receives the frame.
* Only the destination PC accepts the frame, other reject it.
* Doesnt use MAC Address for forwarding
* Works at the physical model of the OSI Model.

2) Switch

* A switch forwards data only to the destination device
* It learns the MAC addresses of connected devices and stores them in a MAC table
* Other PCs do not receive the frame
* Switch works at the Data Link Layer of OSI Model.
* Network traffic is reduced.

IP configuration Used :

Device	IP Address
PC 0	10.0.0.1
PC 1	10.0.0.2
PC 2	10.0.0.3
PC 3.	10.0.0.4

Network Topology :

- Topology : Star Topology
- Justification : All pcs. are connected to central device (Hub / Switch).

Result :

Hence the study of packet tracer and analysis of Network devices has been completed successfully.
